

Fee-for Service Family Medicine Practice Opportunities

Comprehensive Care Model (CCM)

The Comprehensive Care Model is designed specifically for solo primary care physicians. These physicians offer comprehensive primary health care services to their enrolled patients including regular office hours plus one three hour block of after hours services per week. Like their group counterparts, CCM physicians also emphasize illness prevention for their enrolled patients.

Family Health Organization (FHO)

The Family Health Organization Model represents the alignment of Primary Care Networks and Health Service Organizations into one model. FHOs are groups of physicians who provide comprehensive primary health care services to their patients with a focus on illness prevention. Through Institutional Substitution Program Grants, allied health professionals are part of some of the teams as well. FHOs provide care during regular and extended office hours and patients have access to a nurse staffed Telephone Health Advisory Service.
